A 3mm diameter pellet designed to be mixed with cereals or straights for feeding to sheep. Feed to a maximum of 35% of the total dry matter intake. Suitable forage must be available.

To make an 18% protein finished ration mix 70% cereals and 30% Protein Pellets. If some of the cereal is replaced with a lower protein straight such as Sugar Beet then the proportion of Protein Pellets should be increased.

The protein percentage of the finished ration will depend upon the quality of the cereal used.
